April General Meeting/Speaker Series: Postponed

Chapter News

A Message from our Chapter President

April is super spring flower month in Sonoma County as so many wildflowers start blooming in our hills, oak woodlands and grasslands. Even in the flatland vernal pools are blanketed with low growing but exquisite flowers. The shrubs were exceptional earlier in the year, enjoying the clear and warm sunshine of a dry few months. And the prospect of coastal prairie flowers is yet to come.

One aspect of our local botany I never appreciated was the summer dormant plants which I thought were adapted to the dry months from May to November, often disappearing completely. This year I am understanding another adaptive reason for dormancy is as a tactic to survive fire. So many plants in our fire scorched hills are coming back, sometimes with a vengeance. From the buckeyes to the delicate bulbs.

Rarely have I seen better fields of lupines. It is annoying in my garden to lose those plants for the summer but this year in our fire scorched landscape we have surging Matilija poppies (*Romneya coulteri*), Hummingbird sage (*Salvia spathacea*), Epilobium canum, Sticky monkey flower (*Diplacus aurantiacus*), Pacific hounds tongue (*Adelinia grande*) and thick perennial grasses. Even the sorry looking manzanitas and silk tassel (*Garrya elliptica*) are making a brave comeback. Over millennia, these plants have evolved with drought and fire.

A Message from our Chapter President, cont.

The last twelve months have been challenging for many of us but hopefully life will return to normal soon. I’m pretty sure many of our members are out enjoying the fresh air and our wonderful native flora.

I hope to see you on the trail later this season, a good way to reset our sense of wonder and appreciation for nature. There is nothing like viewing our local habitats changing with the seasons, the weather and the all-powerful forces that impact them. For each of you, I wish for a healthy and enjoyable spring.

Eco-Friendly Garden Tour and Spring Plant Sale

Unfortunately, the physical, in-person garden tour has been cancelled. Alternatives are being suggested, such as virtual tours of gardens, phone-in or online plant orders for pick-up, and many others. Please check our website or the Eco-Friendly Garden Tour website for updates.

A big thank you goes to all the volunteers who had planned to help on May 2nd. Thanks to everyone for your support, your offers of help, and your creative ideas to keep this going.

Betty Young
Nursery and Garden Tour Chair

In the April Garden

As finally we get some rain, the California native garden is about to explode in bloom and our native shrubs are looking lush and full.

Vines are a good vertical addition to a garden on a fence or growing on other shrubs for support. We have some lovely native ones like these in the photo below.

Chaparral clematis, *Clematis lasiantha* from one of our board member’s gardens. Here it is clambering over a Coffeeberry, *Frangula californica*. These winter dormant vines are fairly easy to grow and love to climb a supporting shrub for a lovely spring display.

Another native plant species just starting to bloom are the Salvias. They are a diverse and wonderful flowering, pleasant smelling and insect attracting super plant for the Sonoma County garden. We have a bunch of wonderful species but here are a few favorites:

**Pt Sal Sage (Salvia ‘Pt Sal Spreader’)** (shown above). In two years, it is already taking up some real estate so make sure to leave some room for this one. Full sun and monthly water in summer especially on warmer inland sites. It works beautifully on the edges of the garden in masses of three to five.

**Salvia ‘Spathacea’ (Hummingbird sage)** is another consistent bloomer full of flowers right now. It likes a bit more water and part-sun. Tuck this sage in with some grasses or along a swale/low place in the garden.

Finally, we’d love to add photos of natives in our member’s gardens. Send them along with a description of why you like it to cnpsmilobakerhorticulture@gmail.com.

Thanks!

♀ The Horticulture Committee

Field Trip Reports

Moss Walk at Annadel State Park
Field Trip Report
From March 7, 2020
With Ben Carter, Professor in the Department of Biological Sciences San Jose State University

As the rain came down, we excitedly gathered to see the Mosses puff up before our eyes. The long-awaited rain came just in time for this deep learning experience into the microscopic world. Ben Carter blew our minds showing us how many species of Mosses, Liverworts, and Hornworts can be found on the surfaces of the park floor, trees and structures.

Ten slightly moist folks gathered for lunch, and we continued to find more species on our way back. How amazing to learn their life cycles and how they process energy. Super sporeific!

Armstrong State Park Field Trip Report
From February 29, 2020 With Larry Williams

Trillions of Trillium were up to greet us as we strolled around the park. Larry the Tracker (Larry Williams) dove deep into the nature of the redwoods and the forest surrounding it.
Fourteen happy folks experienced the deep power of meeting redwood after redwood in an intimate way.

Fieldtrippers. Photo Credit: Ruthie Saia

Expounding on their growth habits and to see each as an amazing survivor. After lunch in the sun we had a treat at the redwood theatre seeing the blooming fetid adder’s tongue (Scoliopus bigelovii) in bloom. A lovely way to get the year started. Thank you to all who joined us.

**Botany**

There should be no monotony
In studying your botany;
It helps to train
And spur the brain--
Unless you haven't got any.

It teaches you, does Botany,
To know the plants and spot any,
And learn just why
They live or die--
In case you plant or pot any.

You learn, from reading Botany,
Of wooly plants and cottony
That grow on earth,
And what they’re worth,
And why some spots have not any.

You sketch the plants in Botany,
You learn to chart and plot any
Like corn or oats--
You jot down notes,
If you know how to jot any.

Your time, if you'll allot any,
Will teach you how and what any
Old plant or tree
Can do or be--
And that's the use of Botany!
